DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United

Claims 9, 36 and 37 are rejected under 35 USC 102(b) as being anticipated by U.S. Patent No. 4,892,550 to Huebsch. Huebsch discloses in Fig. 1 a "connection rod" comprising a self sealing valve 41, a distal end having a tip 26, a compliant, and an inflatable balloon 23 filled with epoxy (column 8, lines 50-67), a hardenable, rapid setting liquid.

Claim 9 is rejected under 35 USC 102(b) as being anticipated by U.S. Patent No. 5,549,679 to Kuslich. Kuslich discloses in Figs. 50-51 a "connection rod" comprising a self-sealing valve (Fig. 52), a "tip" located on the opposite side of the valve, and a hardenable material 52 (column 9, lines 41-60).

Claim Rejections - 35 USC § 103

The following is a quotation of the appropriate paragraph of 35 U.S.C. 103 which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- (c) Subject matter developed by another person, which qualifies as prior art only under one or more of subsections (e), (f), and (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claim 10 is rejected under 35 USC 103(a) as being unpatentable over U.S. Patent No. 5,549,679 to Kuslich in view of U.S. Patent No. 6,127,597 to Beyar et al. Kuslich is silent with respect to metallic reinforcing wires. Nevertheless, in Figs. 14-17, Beyar et al. teaches a cement filled woven balloon having stainless steel reinforcing wires to "reinforce the structure of the balloon" (column 31, lines 6-29 and 52-60). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to include reinforcing wires with the Kuslich device in order to "reinforce the structure of the balloon."

Claims 9 and 36-38 are rejected under 35 USC 103(c) as being unpatentable over U.S. Patent No. 6,425,923 to Stalcup et al. in view of U.S. Patent No. 4,892,550 to Huebsch. In Fig. 4, Stalcup discloses a "connection rod" comprising a distal tip, and a compliant inflatable tube filled with polymethylmethacrylate (column 3, lines 4-11).

Art Unit: 3731

Stalcup discloses that the inflatable member is attached to a hose 26. The patent fails to disclose a self-sealing valve. Nevertheless, Huebsch teaches the use of a self-sealing valve 41 enabling the hole to close automatically and prevent the inserted material from egressing. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include a self-sealing valve to the Stalcup device enabling the hose to be removably attached to the implant and to prevent the inserted material from egressing.

Claim 39 is rejected under 35 USC 103(a) as being unpatentable over U.S.

Patent No. 4,892,550 to Huebsch. Huebesch discloses a tip 26, but is silent regarding the material of the tip. The tip is a fastener, and it is well known to make fasteners metallic. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to make the fastener metallic.

Claim 40 are rejected under 35 USC 102(b) as being anticipated by U.S. Patent No. 5,549,679 to Kuslich. The balloon comprises a braided balloon. Kuslich further discloses a different embodiment wherein the balloon is made of a porous polymer material (column 7, lines 9-20 and 33-44). It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the braided structure out of a polymer material since polymers are strong, biocompatible, and inexpensive.

Response to Arguments

Applicant's arguments filed December 30, 2004 have been considered but are most in view of the new grounds of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Art Unit: 3731

Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Jacob Davis whose telephone number is (571) 272-4693. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anhtuan T. Nguyen can be reached on (571) 272-4963. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
